

Design and Implementation of File Transfer Protocol (FTP) Server and Security

Daw Thet Htet Nhin, Lecturer, Electronic Engineering Department

ABSTRACT

In the early days, the management of such systems was not easy any dynamic due to lack of today's technology; therefore, the implementation of this server has come with some enhancement to improve the earlier disadvantages.

The main objectives of this project is to make it easier and more secured for the users (Students and the Teachers) to access useful resources such as uploading folders and downloading them.

All these thanks to the very powerful and innovative evolution of sophisticated Information Technologies as exemplified by rapid and dynamic growth of the Internet.
